

February 26, 2021

Dear Resident:

Butler-Bremer Communications is excited to announce that we will be bringing our state-of-the-art fiber-optic network to the Denver area in 2021. The network will provide businesses and residents ultra-fast broadband Internet, as well as Digital TV and phone services. More details on the project and the products in a minute.

The Most Important Step: The most important step you need to take right now is to give us permission to bury the fiber optic line to your home or business and attach a Network Interface Device (NID). There is no cost for us to bring fiber to your location if we can do it when we are building in the community. If we have to come back to do it later there will be a charge.

To give permission go to www.butler-bremer.com/denver and complete the online permission form or you may complete the form that came with this letter and mail it back to us. This is the first and the most important step you can take right now.

Project Timeline: We expect to start building the fiber-to-the-home network in Denver and a few nearby housing developments in the spring of 2021. Construction of the mainline fiber and fiber lines to homes (Phases 1 and 2) will take most of the construction season. We expect to start adding customers (Phase 3) to the network in late fall 2021. When we get to this point, our staff will contact customers who have signed up to schedule installations. All of this is weather dependent.

The Products: Fiber-to-the-home allows us to bring you the best Internet, TV and phone service in the world. When you sign up for fiber service with us, you will have a product that less than 25% of customers in Iowa have. But everyone wishes they had it. It delivers ultra-fast, unlimited Internet. Speed is just a shortcut word to try to describe bandwidth. The more bandwidth you have, the more you can do and the more devices you can connect. Currently, you have the equivalent of a single lane gravel road and we are about to bring you a 1,000 lane, perfectly smooth, paved superhighway. In fact it's capable of giving every customer 1,000Mbps, which equals 1 Gig of service. Products available for both residential or business customers will be: Internet, TV or phone.

We have been in the communications business a long time, more than 100 years in fact, and we've been doing fiber networks for almost 30 years. Currently, we serve customers in the communities and rural areas of Clarksville, Frederika, Janesville, Plainfield, Nashua, Shell Rock and Tripoli – and we look forward to serving all of Denver soon!

All project details can be found on our website www.butler-bremer.com/denver If you have any questions about this project or would like to talk to someone about this, please call our business office at 800-830-1146.

Sincerely,

Richard McBurney, General Manager
Butler-Bremer Communications

Denver - We're bringing you fiber!

It's a really
BIG DEAL!
Fiber Internet • Digital Television • Phone
